ABSTRACT:

PROBLEM TO BE SOLVED: To integrate a damper main body, and to simplify manufacture by forming flat cotton braided limes of, and integrating them with a damper main body by the thermal fusion of a band-shaped polyurethane provided between the damper main body and the cotton braided wires.

SOLUTION: A damper 1 is shaped like a ring, and a pair of flat cotton braided wires 5 are arranged through a band-shaped polyurethane 6 from an outer peripheral edge 3 to an inner peripheral edge 4 of a damper main body 1A along the shape of plural liquid corrugation 2 shaped like a concentric circuit on one face (a) of the damper main body 1A on which the corrugation 2 is formed. This polyurethane 6 is constituted of soft polyurethane from, and the wires 5 and the damper main body 1A are integrated by the fusion. That is, they are integrated at the time of molding the damper, and the polyurethane 6 and the wires 5 are adhered to the damper main body 1A in a shape along the projection and recession of the corrugation 2 so that a thin structure can be obtained as a whole. Thus, adhesion can be improved, and a stable damper 1 can be obtained.

ABSTRACTED-PUB-NO: JP 10336788A

BASIC-ABSTRACT:

NOVELTY - A cloth base material is loaded to a damper (1) from its periphery (3) to the internal circumference (4), forming concentric circular corrugations (2). Strip-shaped polyurethane (6) is thermally bonded to the damper and a thin silver thread (5) is provided between the damper and the polyurethane.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is included for manufacturing method of a damper.

USE - For speaker used for various audio equipment.

ADVANTAGE - Offers thin shaped speaker with excellent tracking property.

DESCRIPTION OF DRAWING(S) - The figure represents perspective view of damper.

(1) Damper; (2) Corrugation; (3) Periphery of damper; (4) Internal circumference of damper; (5) Silver thread; (6) Polyurethane.

ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a damper for speaker where manufacture is facilitated with excellent tracking performance and suitable for a thin profile of the speaker and its manufacturing method.

SOLUTION: In a speaker damper where a tinsel wire is mounted on one face (a) of a damper body 1A with a plurality of concentric corrugations 2 obt'd. by thermally forming a cloth base, along the shape of the corrugations 2 in the direction tying an outer circumferential end 3 and an inner circumferential end 4 of the damper body 1A, round braid tinsel wire 5 is adopted for the tinsel wire and the tinsel wire is integrated by thermal melting of a strip polyurethane 6 provided between the damper body 1A and the round braid tinsel wire 5.

BASIC-ABSTRACT:

NOVELTY - A round braid silver thread (5) is integrated to the damper main portion (1A) via strip-shaped polyurethane (6) which is thermally bonded.

DETAILED DESCRIPTION - An INDEPENDENT CLAIM is also included for damper manufacturing method.

USE - For voice coil of speaker.

ADVANTAGE - Since silver thread is integrated via polyurethane, tracking property is improved and manufacturing of thin shaped speaker is enabled simply. The round braid silver thread is easily changed during heating position application molding time. Does not cause fracture during pressure application since weave pitch of line is gathered coarsely. As sufficient deformation and adhesion property.

DESCRIPTION OF DRAWING - The figure shows perspective diagram of damper. (1A) Damper main portion; (5) Silver thread; (6) Polyurethane.
